# SC 133 BRIDGE REPLACEMENT OVER CROW CREEK, *Pickens County* ONLINE MEETING

## Welcome

The South Carolina Department of Transportation (SCDOT) is holding an Online Meeting about the proposed SC 133 (Crowe Creek Road) Bridge Replacement project in Pickens County. This Online Meeting will end on Tuesday, December 7, 2022. Meeting resources include this handout, a larger display depicting the proposed design (below), and a comment form. The goal of the meeting is to provide you the opportunity to review proposed improvements, submit comments, and/or ask questions regarding the project. Another purpose of this Online Meeting is to gather information from the public or any interested organization on historic or cultural resources in the area.

## PROJECT DESCRIPTION ►

SCDOT proposes to replace the SC 133 Bridge over Crow Creek/Lake Keowee, located north of Six Mile and south of Keowee-Toxaway State Park, in Pickens County. The purpose of the project is to eliminate structural deficiencies of the existing bridge over Crow Creek. This bridge, which was originally constructed in 1969, is load restricted and needs replacement. The existing SC 133 bridge is 165 feet long with 10 spans and a maximum span length of 30 feet. The proposed bridge would be a 3-span structure that is approximately 190 feet in length, with a maximum span length of 70 feet.

## ANTICIPATED PROJECT SCHEDULE ►

Right of Way Acquisition  
Begin Summer 2023

Construction  
Begin Winter 2024

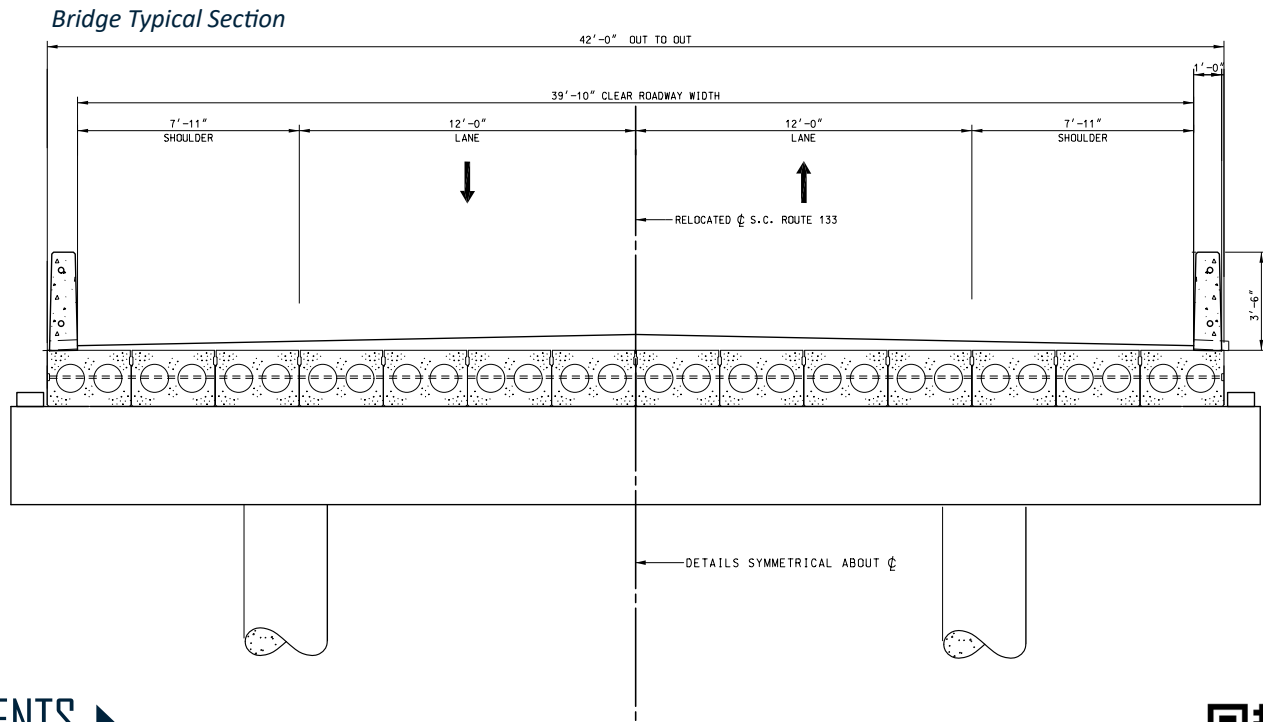

Anticipated Time to Construct  
24 Months

TOTAL ESTIMATED COST ► \$6.425 Million

## PROPOSED DESIGN ►

Key considerations in project design were the avoidance of impacts to the traveling public during construction of the replacement bridge, as well as the minimization of impacts to Crow Creek and adjacent properties. The proposed design would replace the bridge on a new alignment northeast of the existing bridge, allowing the existing two lanes of traffic to remain open during construction. The proposed replacement bridge would include two 12-foot travel lanes with approximately 8-foot shoulders (see typical section below). The proposed design satisfies the purpose and need for the project, maintains two travel lanes during construction, avoids relocations and impacts to public access at the Crowe Creek Landing Boat Ramp, and minimizes utility impacts.
